

# Guidelines For Ordering Fencing

Ordering the materials you need to erect a fence is easy once you understand the components and their individual functions. Here are some basic facts about the materials you should know in order to purchase everything you need.

- Fence Sections are 6' long
- End Posts are used at the beginning and the end of any fence design. They are the heaviest of all the post types.
- Line Posts are used to connect the 6' Fence Sections.
- Corner Posts are used at each corner.
- Swivel Brackets, inserted into End Posts, are used when angles are incorporated into fence designs.
- Gates are erected using 2 Gate Posts
- One Gate requires one set of (two) Hinges.
- Each Gate requires one Latch
- One Drop Rod is needed to secure a set of Double Gates

*The sample layout is intended to show you how and where the fence components are used.*

*The Materials List seen below lists all the materials used in the sample layout.*

Materials List	
17	Fence Sections
9	Line Posts
4	End Posts
